Intelligent temperature monitoring for 19" technology areas

**The Knürr® Watchdog is a compact, powerful technology module for continuous temperature monitoring in the 19" technology zones of modern control room consoles.**

Developed for maximum operational reliability and transparency in sensitive technical environments, the Watchdog enables precise recording and long-term logging of temperature data.

Equipped with up to three externally connectable temperature sensors, the device reliably monitors critical components in real time. The integrated web interface enables user-friendly, browser-based display of the measured values – anytime, anywhere.

Thanks to a freely configurable Ethernet/TCP-IP network interface, the Watchdog can be easily integrated into existing infrastructures.

The IP-based query provides direct access to current temperatures and the historical temperature profile.
